DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Keeton.

Keeton discloses in figures 3-4 a method of providing a pre-surgical warning for used on a body comprising placing a label 40 on the body, providing a visually perceivable indicator 42 on the label, attaching the label to the body. The label has an inferior (the side attached to the body) and a superior side (the side with the writing on it). However, Keeton doesn't disclose attaching the label to surgical sites that are unintended surgical sites. It would have been obvious to one having ordinary skill in the art that the label disclosed by Keeton could be attached to any body portion. If the medical attendant intends on the body portion being a site on the body that is not being operated on, that is a matter of choice as to where to attach the label.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 19 is rejected under 35 U.S.C. 102(B) as being anticipated by Keeton.

Keeton discloses in figures 3-4 a method for providing a pre-surgical warning for use on a body having an intended surgical site to be operated upon during surgical procedure and a plurality of sides which are not intended surgical sites in a surgical procedure comprising the steps of selecting a site (the forehead) which is not an intended surgical site (the eye is the intended surgical site), from a plurality of sites (all the locations on the body which don't include the eye) to provide a selected site (the forehead) which is not an intended surgical site, placing a label 34, on the selected site (the forehead) to provide a labeled selected site which is not an intended surgical site (the forehead), providing a visually perceivable indicator (writing about the procedure to be performed on the eye) on a superior side (fig. 2) of the label to warn against surgery on the labeled selected site (the indicator warns the surgeon that the surgery will be performed on the eye not the forehead), attaching the inferior side (the inside of the indicator) to the labeled selected site (the forehead) which is not the intended surgical site (the eye is the intended surgical site, not the forehead) to warn against surgery on the labeled site (the forehead) which is not the intended surgical site (the eye is the intended site) in a manner wherein the label is removable after the procedure is completed.
